# The Diagnostic Clinic launches Regenerus Life Enhancement Programme

Possibly the most important day  
of the rest of your life

**The Diagnostic Clinic** in London's New Cavendish Street, the UK's premier centre for Integrated Medicine, launches **Regenerus**, the most comprehensive anti-ageing screening programme available in the UK.

External ageing is a result of what happens inside your body: your metabolism, genetic inheritance, cell deterioration and the nervous system, as well as your diet, lifestyle and environment. With the right care, it is really possible to retard the ageing process and improve the quality and length of your life.

With this in mind, **TDC** has developed the **Regenerus** Life Enhancement Programmes, a series of intensive health screenings for men and women of all ages which address the real causes of ageing and analyse the hidden conditions that lie within.

The **Regenerus** programmes investigate the quality of your body, the uniqueness of your genetic make-up, determine possible deficiencies in your system and then prescribe to you a personal blueprint to help rejuvenate your whole body condition, stem the ageing process and help you avoid future health risks.

Three programmes are offered: Optimum Performance Screen, Anti-Ageing Risk Analysis and the Optimum Health Life Extension Screen, each covering a variety of specific tests and examinations. Programmes are designed to help you understand your body, retard the onset of internal and external ageing and ultimately help you maximise the quality and length of your life.

TDC's Dr Rajendra Sharma is recognised as a leading expert in integrated medicine and is a Peer Review Board Member and speaker for The UK Anti-Ageing Conference as well as a member of The American Academy for Anti-Ageing.
